

To get started write your ideas on a programming specifications page.

Here is a sample specification page for you to follow in writing your specifications page. (Please - Do **NOT** attempt to write paragraphs to cover each item, that becomes a waste of time for you and for me. Just list the essential facts following the example below.)

### **Indicator and/or Strategies to work on the following Categories:**

Forex, Futures and / or Stocks

### **Specific Symbols:**

@YM

### **Chart Time Frame:**

5 min

### **Strategy Indicators & settings used**

MACD with settings 12,26,9 (make setting an Input allows optimization)

Bollinger Bands with Setting 20 (make setting an - Input)

EMA - 10 period - Make Setting an input

### **ENTRIES:**

#### **LONG Entry Set-up**

#1- EMA > Prior bar EMA and EMA above BB mid line

#2 - MACD > MACD Avg line and MACD > Prior Bar MACD + "X" Input amount

#### **SHORT Entry Set-up**

#1- EMA < Prior bar EMA and EMA below BB mid line

#2 - MACD < MACD Avg line and MACD < Prior Bar MACD - "X" Input amount

List any filters or items regarding your entries.

### **EXITS:**

#### **StopLoss Exit**

20 ticks - (Input)

#### **Trailing Exit**

8 ticks minimum profit before activated - (Input)

12 ticks trailing exit (Input)

#### **Profit Exit**

40 ticks - (Input)

List the specs on whatever kind of exit you might want.
